

Java FSD - Day 5 Summary

Control Structures & Looping Statements

- If
- If-Else
- Else-If Ladder
- Nested If
- Switch Case
- For Loop
- While Loop
- Do-While Loop

If Statement

- Executes a block of code only if the given condition is true.
- Syntax: `if (condition) { ... }`

If-Else Statement

- Used when there are two outcomes based on a condition.
- Syntax: `if (condition) { ... } else { ... }`

Else-If Ladder

- Checks multiple conditions in sequence.
- The first matching condition is executed.

Nested If Statement

- An if statement inside another if statement.

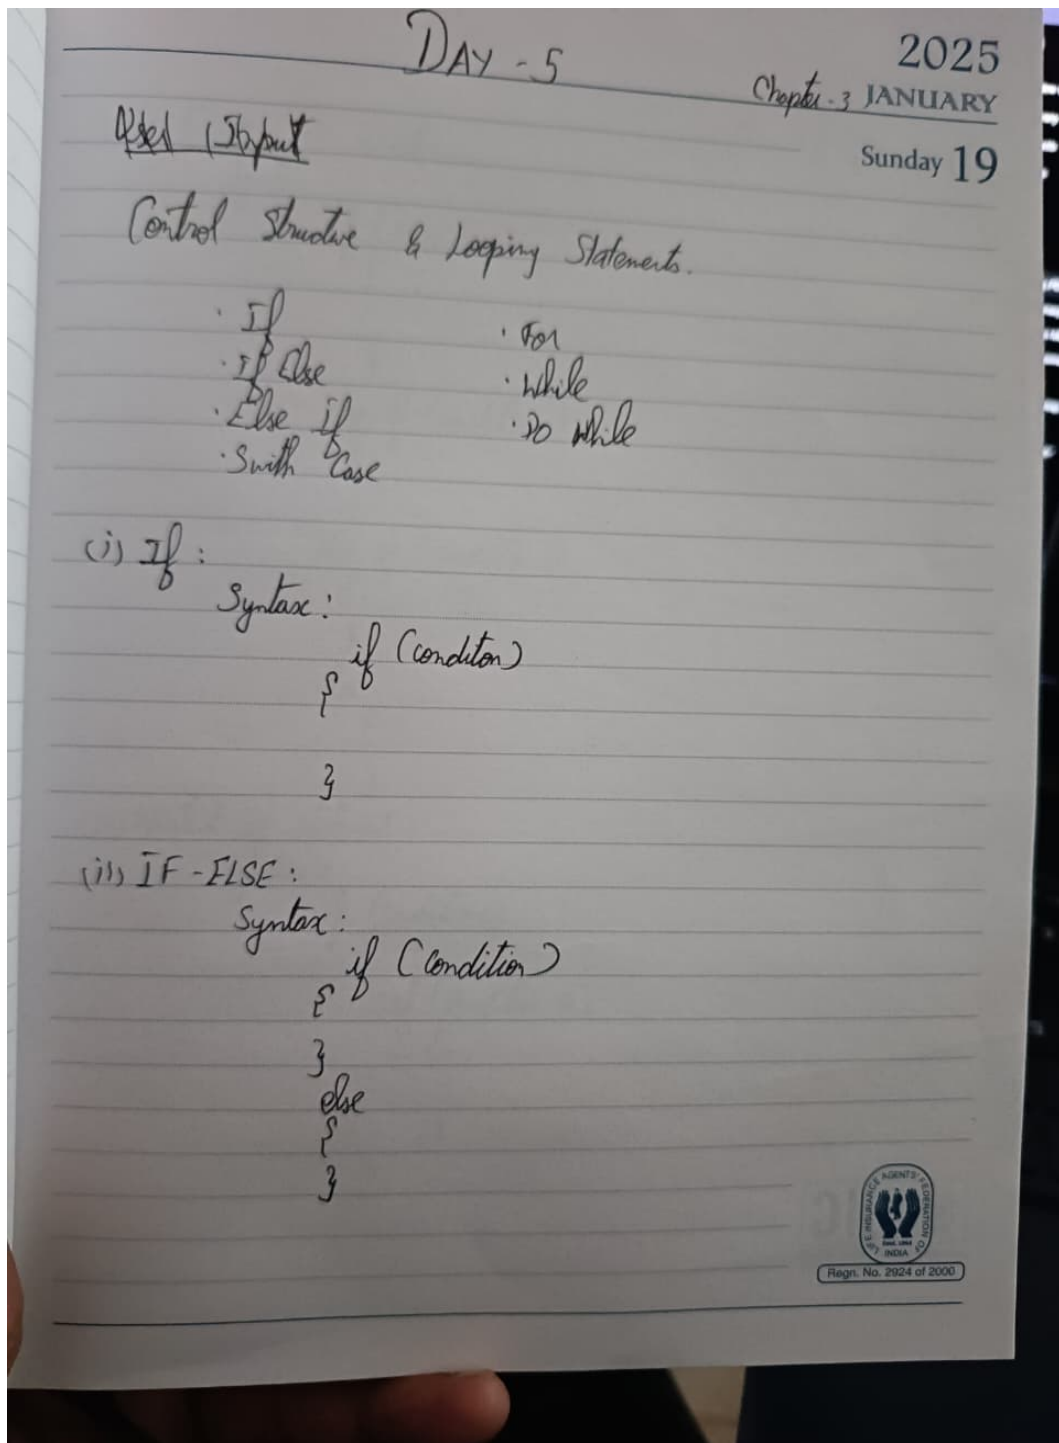

Switch-Case

- Selects one option from multiple cases.
- Uses case, break, and default keywords.

Loops

- For Loop: Repeats a block for a fixed number of times.
- While Loop: Repeats while the condition remains true.
- Do-While Loop: Executes once before checking the condition.

Handwritten Notes

(iii) ELSE - IF Ladder

Syntax:

```
if (condition)
{
```

```
}
```

```
else if (condition)
{
```

```
}
```

```
else if (condition)
{
```

```
}
```

```
else
{
```

```
}
```

(iv) Nested If statement:

Syntax:

```
if (condition 1)
{
```

```
    if (condition 2)
    {
```

```
    }
```

```
}
```

(V) SWITCH - CASE

Syntax:

```
Switch (Variable)
```

```
{
```

```
Case value 1:
```

```
statement;
```

```
break;
```

```
Case value 2:
```

```
statement;
```

```
break;
```

```
default:
```

```
statement
```

```
}
```
